

Why Red Hat OpenShift was chosen to implement ECPaaS?

OpenShift was chosen because of these benefits:

1. Multi-tenant environment
2. Supports DevOps practices natively
3. Supports builder images for multiple programming languages
4. Flexible networking model supports multiple network configurations
5. Provides life-cycle management and monitoring of deployed workloads
6. Can enforce resource quotas on storage, CPU and memory consumption
7. Supports multiple regions and zones for workload deployment
8. Supports flexible roll-out and roll-back capabilities for patching
